

MOOG

MOOG's experience with Bajog can be categorised into two areas: Design and Production. Our experience with Bajog in these areas is as follows:

Design: Bajog's experience of filter design was of great benefit to Moog during the design phase. They were able to suggest a filter topology best suited for our application and offer us advice on a 'overvoltage protection strategy' for the filter. They were very flexible in trying to incorporate changes that we suggested based on our testing. Technical queries were always answered in a timely manner.

Production: Bajog have made every effort to meet our demands with regard to Production, delivery and repair. They have in the past achieved very short lead times (3-4 weeks) in order for us to meet our customer demands. In general Moog are pleased with the quality of product that we receive from Bajog.
